

MODULAR PANELS

Modular panels for protection of structures/vehicles

Protection of critical military infrastructure against projectiles, fragments, blast effects, RPG attack and vehicle penetration.

Protection of important structures e.g. command posts, shelters, containers, stockrooms, stationary vehicles and firing positions according to STANAG 2280.

Advantages:

- High protective ability
- Low space requirement
- Lightweight construction
- Use of local materials for the structure's infill
- Easy assembly and disassembly
- High modularity
- All parts manually manipulable

Successfully passed military trials and was introduced to the Army of Czech Republic in 2020, KCM number 014545000250.
